FreeLinc is an industry leading wireless technology organization focused on delivering technological superior accessories for use with two-way radios. FreeLinc's leading-edge Near-Field Magnetic Induction (NFMI) communication technology is designed to add differentiated wireless value to the portable radio communication industry.

FreeLinc has created a line of products designed for Public Safety, Government, Military and Commercial users of two-way radios. The FreeLinc wireless accessories are the only products that can be found in the marketplace today that offer a secure means of wireless communication incorporated into devices such as headsets and speaker-microphones for two-way radios.

FreeLinc utilizes a near-field magnetic communication technology to support the wireless capabilities of all FreeLinc products. There is literally a magnetic communications "bubble" created between the headset or speaker-microphone and the radio unit. This communications bubble is immune from RF interference and virtually secure from eavesdropping. The Near-Field Magnetic Induction communication bubble requires low power to maintain which allows for extended talk-time of up to 20 continuous hours in most FreeLinc products.

The benefits of the FreeLinc wireless products include:

- Completely wireless for safer mobility
- Most reliable wireless technology eliminates threat of interference
- A secure communications bubble surrounding the user
- Superior battery life with 20 hours of continuous talk time

FreeLinc will enable users of two-way radios to experience *wireless mobility, wireless safety, wireless security* and *unwavering wireless confidence* in your portable radio accessories.

*FreeLinc... Your Confidence in Wireless!*
